

NourDoc – Visual Recommendations for the Website

I would make the visual language **clean, clinical, human and technologically sophisticated**—closer to a premium global HealthTech company than a generic SaaS/AI website.

The two brand colors should be used as **accents**, not as large background fields:

- **NourDoc Teal:** #507D88
- **NourDoc Light Teal:** #7AB1BF
- **Primary background:** White #FFFFFF
- **Supporting neutrals:** very light cool gray, charcoal and soft gray
- **Logo:** use the **original colored logo** on white backgrounds; use the **black/white variant** where contrast or monochrome treatment requires it.

I would also avoid the usual clichés: glowing robot heads, humanoid AI, circuit-board brains, excessive blue gradients, floating holograms and generic stock doctors staring at laptops.

The visual message should be:

Human healthcare + intelligent technology + clinical trust + global connectivity.

NOURDOC — VISUAL DIRECTION

Overall Visual Concept

“Human Intelligence, Augmented by AI.”

Every major page should combine three visual ingredients:

Human faces

→ establishes healthcare, empathy and global relevance.

Clinical environments

→ establishes HealthTech credibility.

AI/data visualization

→ establishes technological capability.

The AI should feel **embedded into healthcare workflows**, not like a separate futuristic technology.

PAGE 01 — HOME

Hero Visual

I recommend a **large hero composition rather than a single stock photograph.**

Visual concept

A confident female or male physician in a modern clinical environment, speaking naturally with a patient.

The physician is **not looking at a computer**.

A subtle NourDoc AI visualization appears beside or behind the conversation:

Voice waveform → AI processing → structured clinical note

This immediately communicates the NourDoc proposition.

Suggested visual

Pakistani female physician + Pakistani male patient

Modern Pakistani healthcare environment, bright white clinical room, natural daylight, professional but human.

The doctor is engaged with the patient rather than looking at a screen.

A subtle translucent teal AI layer shows:

Conversation

↓

AI

↓

Clinical Note

Use #507D88 and #7AB1BF only for the AI visualization.

Homepage secondary visual

“From Conversation to Clinical Intelligence”

Create a clean horizontal process illustration:

Doctor + Patient

→  **Voice**

→  **AI Understanding**

→  **Clinical Documentation**

→  **ICD-10 / CPT**

→  **EHR / EMR / HIMIS**

Use simple line icons rather than photographs.

Android Trial Section

Visual

A realistic modern Android smartphone displaying the NourDoc interface.

Beside it:

Doctor speaking → NourDoc processing → SOAP note

Use a **female European or Pakistani doctor** for diversity.

The phone should look like a real healthcare application, not a generic app mockup.

Visual message

“Your AI Clinical Documentation Assistant — In Your Pocket.”

PAGE 02 — WHY NOURDOC

Hero

Visual concept

A **split-screen visual**.

Left

Clinician surrounded by administrative tasks:

- typing
- paperwork
- computer screen
- documentation
- coding

Use subtle gray/neutral treatment.

Right

Same clinician:

- looking at patient
- listening
- engaging
- relaxed clinical environment

Use NourDoc teal accents on the right.

Message

From Administrative Burden → Clinical Focus

This is much more powerful than showing another generic doctor with a laptop.

“The Bigger Opportunity”

Use a **clinical information ecosystem diagram**.

Center:

Clinical Conversation

Around it:

- Documentation
- Coding
- Billing
- EHR
- EMR
- HIMS
- Analytics
- Clinical Intelligence

Use connected nodes and thin teal lines.

This establishes NourDoc as a **platform**, not an app.

PAGE 03 — PRODUCT

Hero

Visual

A sophisticated **clinical AI dashboard + human interaction composition**.

Left side:

Doctor/patient conversation.

Right side:

NourDoc interface showing:

- transcription
- SOAP structure
- assessment
- plan
- ICD-10
- CPT

Avoid displaying excessive readable fake medical data. Keep the UI visually authentic but generic.

Product capabilities

Use a **2 × 4 icon grid**.

Icons

Ambient Capture

Microphone / waveform

AI Transcription

Document + waveform

Clinical Understanding

Brain / neural network

SOAP Documentation

Structured document

ICD-10

Medical coding tag

CPT

Procedure/coding symbol

✓ Clinical Review

Checkmark inside medical document

Integration

Connected nodes

Use **thin-line icons** with #507D88.

PAGE 04 — BENEFITS

Hero

Visual

A global healthcare montage.

Use **four different healthcare professionals**:

- Pakistani male physician
- US female physician
- European male physician
- African female physician

But don't make it look like a corporate diversity collage.

Instead, show **four authentic clinical moments** arranged as a sophisticated editorial grid.

Each represents:

Focus

Efficiency

Scale

Human Connection

Benefits by stakeholder

Use human photography here.

Clinicians

Pakistani / South Asian clinician.

Practices

European clinician/team.

Hospitals

US hospital team.

Coding & Billing

African or Arabic healthcare operations professional working with clinical data.

Patients

A diverse patient/clinician interaction.

The purpose is to communicate:

NourDoc is global by design.

PAGE 05 — SECURITY & COMPLIANCE

This page should be **much more restrained visually**.

Do not use doctors everywhere.

Hero visual

Use a sophisticated **healthcare data-security illustration**.

White background.

Central:

NourDoc

Surrounded by:

 Secure Data

 Identity

 Access Control

 Cloud

 Healthcare

 Governance

✓ Human Review

Connected through a subtle teal network.

Cloud / On-Premises

Use an architectural illustration:

CLOUD

NourDoc Platform

Healthcare Organization

ON-PREMISES

Organization Infrastructure

NourDoc

HYBRID

This visually communicates deployment flexibility in seconds.

PAGE 06 — SUBSCRIPTION

This page should be **product-led**, not photography-led.

Hero

Show four elegant pricing cards:

FREE

Try

STARTER

Individual

PROFESSIONAL

Practice

ENTERPRISE

Scale

Use subtle differences in the amount of teal accenting.

Avoid four completely different colors.

Visual beneath plans

Create a growth pathway:

Individual

→

Practice

→

Hospital

→

Enterprise

with NourDoc expanding from:

1 clinician

to

teams

to

organizations

to

enterprise-scale healthcare operations

This reinforces the platform's scalability.

PAGE 07 — MEDICAL CODING & BILLING

This should become one of the **strongest visual pages on the entire website**.

It is where NourDoc differentiates itself from ordinary AI scribes.

Hero Visual

Voice → Clinical Intelligence → Coding → Claim-Ready Documentation

Use a cinematic but clean visual process.

Stage 1

Voice / Clinical Notes

Stage 2

NourDoc AI

Stage 3

Clinical Documentation

Stage 4

ICD-10 + CPT

Stage 5

Structured Output

Stage 6

Coding / Billing / Claims

1M+ ENCOUNTERS

This deserves a **large visual number**.

1M+

Clinical Encounters / Day

Designed for appropriately configured enterprise environments

Put this in very large typography using #507D88.

Behind the number, use a subtle stream of thousands of tiny clinical encounter nodes moving through a NourDoc processing engine.

Do **not** use a giant “AI brain.”

Use a **data-processing architecture visualization**.

Batch Processing Visual

Create an enterprise pipeline:

VOICE

NOTES

TRANSCRIPTS

RECORDS

NOURDOC AI ENGINE

TRANSCRIPTION

CLINICAL UNDERSTANDING

ICD-10 + CPT

STRUCTURED OUTPUT

CODING

BILLING

CLAIMS

CLEARANCE

Each stage gets a simple icon.

Multiple Output Formats

This should be visualized strongly.

Place:

NourDoc Output

in the center.

Then branching into:

JSON

XML

CSV

PDF

API

Structured Data

Custom Formats

This is an important enterprise selling point.

PAGE 08 — INTEGRATIONS & DEPLOYMENT

Hero

Visual

A central NourDoc platform with connections to:

 **EHR**

 **EMR**

 **HIMS**

 **Billing**

 **Coding**

 **Analytics**

 **Cloud**

 **On-Premises**

Use a sophisticated **hub-and-spoke architecture**.

NourDoc sits in the center.

This visually reinforces:

NourDoc is the clinical intelligence layer.

EHR / EMR / HIMS section

Use three large cards:

EHR

Clinical records

EMR

Clinical documentation

HIMS

Hospital operations

Each gets a simple line illustration rather than a stock photograph.

Deployment section

Use three architectural illustrations:

CLOUD

ON-PREMISES

HYBRID

Underneath:

Flexible deployment for different healthcare environments.

PAGE 09 — PARTNERS & COLLABORATORS

This is where the **global human face strategy** should become especially visible.

Hero

Healthcare Has No Borders.

Show a sophisticated world map with **real healthcare professionals located across regions.**

Suggested people:

PK Pakistani female physician

CA Canadian male healthcare professional

FI Finnish female researcher

US US male physician

EU European female clinician

SA Arabic male physician

AE Arabic female healthcare professional

ZA African male clinician

Don't put flags next to their faces.

Instead, use subtle geographic positioning on the map.

The message should be:

Engineering, research and healthcare perspectives working together across borders.

Collaboration categories

Use four visual cards:

Research

Microscope / research icon

Clinical

Stethoscope / clinician icon

Technology

AI / API / integration icon

Commercial

Global network icon

PAGE 10 — ABOUT & CONTACT

About Hero

Use a **human-centered photograph**, not a technology illustration.

Visual

A doctor speaking with a patient while subtle NourDoc interface elements are visible in the background.

Potential combination:

Female Pakistani doctor + male patient

or

Male Arabic doctor + female patient

The photograph should communicate warmth, trust and professionalism.

“Canadian Ownership. Pakistani Engineering. Finnish Research & Healthcare Perspectives.”

This deserves a visual treatment.

Use three sophisticated photographic panels:

CANADA

Healthcare/business leadership

PAKISTAN

AI/software engineering team

FINLAND

Research/clinical environment

Connect them with a thin teal line:

Canada ↔ Pakistan ↔ Finland

Then:

Global Healthcare AI

This makes the collaboration story tangible.

Contact Section

Use a **real human healthcare/business professional** on one side and the contact form on the other.

Potential visual:

Professional **US/European female healthcare executive** or **Arabic male healthcare executive**.

Headline:

Let's Talk About Your Healthcare Workflow.

The visual should communicate:

"You are speaking to a serious healthcare technology company."

not:

"You are downloading an app."

GLOBAL VISUAL SYSTEM

1. Photography

I recommend **high-quality editorial healthcare photography**, not generic corporate stock photography.

People should appear:

- Natural
- Professional
- Age appropriate
- Clinically credible
- Engaged with each other
- Looking at patients rather than constantly looking at computers

Geographic representation

Across the 10 pages, naturally rotate:

Pakistani

Male + female

North American

Male + female

European

Male + female

African

Male + female

Arabic / GCC

Male + female

The goal is not to show every demographic on every page.

The goal is to make the platform visibly **global and inclusive** without looking manufactured.

2. AI VISUAL LANGUAGE

For AI capabilities, use **abstract clinical intelligence**, not robots.

Good visual metaphors

- Voice waveforms
- Clinical data streams
- Neural networks
- Structured documents
- Connected data nodes
- Medical terminology extraction
- AI processing pipelines
- Secure data flows
- API connections
- Clinical information layers

Avoid

- ✗ Humanoid robots
- ✗ Robot doctors
- ✗ Giant AI brains
- ✗ Blue sci-fi holograms
- ✗ Futuristic hospital corridors
- ✗ Generic circuit boards
- ✗ Excessive glowing effects

NourDoc should look like **real healthcare infrastructure enhanced by AI**.

3. PROCESS ICONOGRAPHY

Use one consistent icon family throughout.

I recommend:

Thin-line / rounded medical-tech icons

Stroke color:

#507D88

Secondary:

#7AB1BF

Background:

#FFFFFF

Use icons for:

-  Voice
-  AI
-  Documentation
-  Clinical
-  ICD-10
-  CPT
-  Processing
-  Batch
-  Integration
-  Cloud
-  On-Premises
-  Security
-  Compliance
-  Hospital
-  EHR/EMR
-  Analytics

The actual website should use professionally designed SVG icons rather than emoji.

4. NOURDOC COLOR APPLICATION

I would use the palette approximately like this:

#507D88

Primary NourDoc teal.

Use for:

- Headings accents
- Primary CTA buttons

- Icons
- Process lines
- AI visualizations
- Important numbers
- Navigation accents

#7AB1BF

Supporting light teal.

Use for:

- Secondary highlights
- Hover states
- Background shapes
- Data visualization
- Soft gradients
- Cards
- AI processing elements

White

Primary website background.

This should remain dominant.

5. VISUAL STYLE OF SECTIONS

A good page rhythm would be:

Human photograph

Clean text

Process illustration

Technology visualization

Human photograph

CTA

This avoids the website becoming either:

- too corporate/clinical, or
 - too futuristic/technical.
-

6. HERO IMAGE STYLE

Every hero should follow one rule:

Human first. Technology second.

For example:

Doctor + Patient

with a subtle AI overlay.

Not:

AI graphic

with a tiny doctor somewhere in the background.

That distinction is important for NourDoc's brand.

7. THE “NOURDOC AI ENGINE” VISUAL

I recommend developing one proprietary visual motif that appears throughout the website.

Imagine a **soft teal clinical data stream**.

It starts as:

 **Human Speech**

Then becomes:

Waveform

Then:

AI Processing Nodes

Then:

Structured Clinical Data

Then branches into:

SOAP | ICD-10 | CPT | EHR | EMR | HIMS | Billing

This becomes NourDoc's **visual signature**.

It can appear in the hero, product page, batch processing page, integrations page and presentations.

8. THE 1M+ VISUAL

This deserves special treatment.

Don't make it look like a marketing gimmick.

Use:

1M+

Clinical Encounters / Day

Then beneath:

Designed for appropriately configured enterprise environments

Behind it:

A subtle visualization of thousands of small encounter nodes flowing through the NourDoc processing architecture.

This communicates **scale through infrastructure**, rather than merely through typography.

9. BRAND PHOTOGRAPHY DIRECTION

Lighting

Bright natural light.

Environment

Modern healthcare facilities.

Clothing

Realistic clinical attire.

Composition

Lots of white/negative space.

Emotion

Focused, confident, human.

Diversity

Authentic global healthcare representation.

Retouching

Minimal.

The people should look like **real healthcare professionals**, not models posing for a pharmaceutical advertisement.

10. MOST IMPORTANT VISUAL STORY

Across the entire website, the visitor should subconsciously understand this progression:

PAGE 1

A doctor talks to a patient.

PAGE 2

AI reduces the administrative burden.

PAGE 3

NourDoc understands and structures the conversation.

PAGE 4

Clinicians and organizations benefit.

PAGE 5

The information is handled responsibly.

PAGE 6

Anyone can start with the Android app and scale through subscriptions.

PAGE 7

Enterprise organizations can process massive volumes through batch processing.

PAGE 8

NourDoc connects to healthcare infrastructure.

PAGE 9

Global healthcare, research and technology communities collaborate.

PAGE 10

NourDoc is a serious global HealthTech AI company with a human purpose.

Final visual positioning

I would give the entire website this visual personality:

White clinical environment + sophisticated teal technology + authentic global healthcare professionals + restrained AI visualization + strong information architecture.

The key is that **AI should be visible, but never dominate the humans.**

That would make NourDoc look substantially more like a **global HealthTech AI platform** and much less like a conventional AI scribe/SaaS product.
