NOURDOC

Ambient Clinical Intelligence for Modern Healthcare

PAGE 01 — HOME

HERO

Let AI Handle the Documentation. Let Doctors Focus on Care.

NourDoc is a cloud-native Ambient Clinical Intelligence platform that transforms clinical conversations and notes into structured, actionable healthcare information.

From a clinician using the NourDoc Android app to an enterprise processing millions of encounters, NourDoc helps reduce administrative workload and turn clinical information into structured documentation, coding support and downstream-ready data.

[TRY NOURDOC FREE] [BOOK A DEMO]

AI-assisted clinical documentation. Enterprise-scale processing. Flexible deployment.

THE PROBLEM

Healthcare Has an Administrative Burden Problem

Every clinical encounter creates valuable information.

But turning that information into useful documentation can require significant manual effort.

Clinicians document.

Coders review.

Billing teams process.

Administrators reconcile.

Healthcare organizations move information between systems.

NourDoc brings AI into the information workflow.

Let AI assist with the administrative work. Let healthcare professionals focus on the clinical work.

FROM CONVERSATION TO CLINICAL INTELLIGENCE

One Platform. Multiple Healthcare Workflows.

Clinical Conversation / Voice / Notes

AI Transcription & Clinical Understanding

Structured Clinical Documentation

ICD-10 & CPT Coding Assistance

Multiple Output Formats

EHR / EMR / HIMS / Coding / Billing Workflows

START WITH YOUR PHONE

Your AI Clinical Documentation Assistant — In Your Pocket

Experience NourDoc through the Android app.

Record a consultation, let NourDoc process the conversation, review the generated documentation and continue with your clinical workflow.

FROM ONE CLINICIAN TO ENTERPRISE SCALE

Built to Scale With Healthcare

NourDoc is designed as a scalable healthcare AI platform capable of supporting high-volume clinical information processing.

Its enterprise architecture is designed to **entertain 1+ million clinical encounters per day** in appropriately configured environments.

That means NourDoc can support both:

Point-of-Care Documentation

One clinician. One consultation. One intelligent clinical note.

and

Enterprise Batch Processing

Thousands or millions of encounters processed through scalable workflows.

FLEXIBLE DEPLOYMENT

Cloud-Native by Design. On-Premises When Required.

NourDoc is built for modern cloud environments while also supporting organizations with specific infrastructure, governance or deployment requirements.

Cloud

On-Premises

Enterprise / Hybrid

PAGE 02 — WHY NOURDOC

HERO

Healthcare Technology Should Reduce Administrative Work — Not Add to It

Clinicians should be able to focus on patients, diagnosis and care.

Yet modern healthcare requires extensive documentation, coding, reporting and information management.

NourDoc brings AI into these workflows to help reduce repetitive administrative effort.

FOR CLINICIANS

Be Present. Document Smarter.

Spend Less Time Typing

Let AI transform natural conversations into structured documentation.

Stay Focused on the Patient

Reduce the need to continuously switch attention between the patient and the screen.

Review Instead of Reconstruct

NourDoc generates documentation that clinicians can review, edit and approve.

FOR HEALTHCARE ORGANIZATIONS

Move From Manual Documentation to Intelligent Workflows

NourDoc can support:

- Clinical documentation

- Medical coding
 - Billing preparation
 - Clinical data processing
 - Record management
 - EHR / EMR / HIMS workflows
 - High-volume encounter processing
 - Batch processing
-

THE BIGGER OPPORTUNITY

Documentation Is Only the Beginning

A clinical conversation contains much more than a note.

It can contain:

Symptoms • History • Findings • Assessment • Treatment Plans • Diagnoses • Procedures • Clinical Terminology • Coding Information

NourDoc is designed to transform this information into structured digital intelligence that can move into downstream healthcare workflows.

HUMAN-IN-THE-LOOP

AI Assists. Professionals Remain in Control.

NourDoc is designed as an assistive technology.

AI generates and structures information.

Qualified professionals review, validate and finalize information according to their organization's workflow and applicable requirements.

The objective is not to replace clinical judgment.

The objective is to give clinical judgment more time and better-organized information.

CTA

Let AI Take Care of More of the Administrative Work.

[TRY NOURDOC] [BOOK A DEMO]

PAGE 03 — PRODUCT

HERO

Meet NourDoc

Ambient Clinical Intelligence for the Complete Documentation Workflow

NourDoc combines AI-powered speech processing, clinical language understanding, structured documentation, coding assistance and healthcare-system integration.

CORE CAPABILITIES

Ambient Clinical Capture

Capture natural doctor–patient conversations without requiring clinicians to interrupt their consultation workflow.

AI Transcription

Convert spoken clinical conversations into structured text.

Clinical Language Processing

Identify and organize clinically relevant information from conversations and notes.

SOAP Documentation

Generate structured:

Subjective → Objective → Assessment → Plan

documentation.

ICD-10 Assistance

Support diagnosis documentation and ICD-10-oriented workflows.

CPT Assistance

Support procedure and service documentation workflows involving CPT.

Clinician Review

Review, edit and validate AI-generated documentation before finalization.

Structured Output

Make processed information available in multiple formats for downstream processing.

MULTIPLE INPUTS

Work With the Information You Already Have

NourDoc can be configured to process:

Live Clinical Conversations

Recorded Voice

Existing Clinical Notes

Transcripts

Structured Clinical Data

This allows NourDoc to support both point-of-care and enterprise processing environments.

FLEXIBLE DEPLOYMENT

Cloud-Native. Enterprise-Ready. Deployment-Flexible.

Cloud

Scalable, centrally managed healthcare AI.

On-Premises

Deployment within an organization's own infrastructure where required.

Hybrid

Integration between NourDoc and existing enterprise environments.

INTEGRATION-READY

Designed to Connect With Healthcare Systems

NourDoc can provide integration capabilities for leading:

EHR — Electronic Health Records

EMR — Electronic Medical Records

HIMS — Hospital Information Management Systems

along with coding, billing, telemedicine and other healthcare technology platforms.

CTA

See NourDoc in Action.

[TRY NOURDOC] [BOOK A DEMO]

PAGE 04 — BENEFITS

HERO

More Clinical Time. Less Administrative Friction.

NourDoc creates value across the healthcare ecosystem.

FOR CLINICIANS

More Patient Focus

Spend more of the consultation engaging with the patient.

Less Documentation Burden

Reduce repetitive note-taking and post-consultation documentation.

Faster Clinical Records

Transform conversations into structured documentation.

Coding Assistance

Support ICD-10 and CPT-oriented workflows.

FOR PRACTICES

Consistent Documentation

Create standardized AI-assisted documentation workflows.

Operational Efficiency

Reduce repetitive administrative processes.

Scalable Workflows

Support growing consultation volumes without proportionally increasing documentation effort.

FOR HOSPITALS

Enterprise Scale

Support high-volume clinical documentation environments.

System Integration

Connect with EHR, EMR and HIMS environments.

Flexible Deployment

Use cloud-native infrastructure or configure on-premises deployments where required.

FOR CODING & BILLING ORGANIZATIONS

Process Clinical Information at Scale

NourDoc's batch-processing capability is designed to process large volumes of voice and clinical documentation.

Structured Coding Support

Transform clinical information into structured outputs supporting ICD-10 and CPT workflows.

Downstream-Ready Outputs

Make information available in formats suitable for onward processing, review, coding, billing and clearance workflows.

FOR PATIENTS

A More Human Consultation

When clinicians spend less time looking at screens and typing, there is more opportunity for direct human interaction.

THE RESULT

AI Handles More of the Information Work.

Healthcare professionals stay focused on healthcare.

[[TRY NOURDOC](#)] [[BOOK A DEMO](#)]

PAGE 05 — SECURITY & COMPLIANCE

HERO

Healthcare AI Requires Trust

Clinical conversations and medical records contain sensitive information.

NourDoc is being developed with security, privacy, access control, governance and responsible AI principles at the center of the platform.

SECURITY BY DESIGN

Controlled Access

Support appropriate authentication and authorization mechanisms.

Data Governance

Support organizational policies for data handling, retention and access.

Secure Processing

Designed for controlled processing of healthcare information across supported deployment environments.

Auditability

Enterprise deployments can be configured around appropriate monitoring and audit requirements.

CLOUD-NATIVE

Built for Modern Healthcare Infrastructure

NourDoc's cloud-native architecture is designed to support:

- Scalability

- Centralized management
 - Integration
 - Continuous platform evolution
 - Enterprise workloads
 - High-volume processing
-

ON-PREMISES

When Your Data Environment Requires More Control

Some healthcare organizations have specific requirements relating to:

- Infrastructure ownership
- Data residency
- Internal governance
- Network architecture
- Organizational policies
- Deployment control

For such environments, NourDoc can be configured for **on-premises deployment**.

RESPONSIBLE AI

AI Generates. Professionals Review.

NourDoc is designed to keep appropriate human oversight within clinical workflows.

AI-generated documentation and coding-related outputs should be reviewed and validated according to the organization's policies and applicable professional requirements.

COMPLIANCE

Designed for Different Healthcare Markets

Healthcare privacy, security and compliance requirements differ by country, organization and deployment model.

NourDoc works with organizations to determine the appropriate technical, contractual and governance configuration for their operating environment.

Security and compliance are part of the deployment conversation — not an afterthought.

CTA

Build Trusted Healthcare AI With NourDoc.

PAGE 07 — MEDICAL CODING & BILLING

HERO

From Clinical Voice & Notes to Claim-Ready Documentation

NourDoc Enterprise Batch Processing

NourDoc extends beyond point-of-care documentation.

Its enterprise batch-processing capability is designed to help medical coding, billing and healthcare operations organizations process large volumes of clinical information.

THE ENTERPRISE CHALLENGE

Medical coding and billing organizations may receive large volumes of:

Voice Recordings

Clinical Notes

Consultation Transcripts

Medical Documentation

Digital Records

Converting these inputs into structured, reviewable and coding-oriented information can be resource-intensive.

NourDoc is designed to automate and accelerate this information-processing layer.

ENTERPRISE-SCALE PROCESSING

Designed to Entertain 1+ Million Clinical Encounters Per Day

NourDoc's platform architecture is designed to **entertain 1+ million clinical encounters per day** in appropriately configured enterprise environments.

This capability is intended for organizations where individual encounter processing is not enough.

Process thousands — or millions — of encounters through scalable workflows.

THE BATCH PROCESSING PIPELINE

From Voice or Notes to Downstream Processing

01 — INPUT

Voice

Clinical Notes

Transcripts

Existing Documentation

↓

02 — AI PROCESSING

Speech-to-Text

Clinical Language Processing

Clinical Structuring

↓

03 — DOCUMENTATION

SOAP Notes
Clinical Summaries
Structured Clinical Information

04 — CODING SUPPORT

CPT
Clinical Terminology
Coding-Oriented Information

05 — OUTPUT

Structured Data
Documents
APIs
Integration Payloads
Organization-Specific Formats

06 — DOWNSTREAM WORKFLOW

Medical Coding
Medical Billing
Claims Preparation
Clearance
EHR / EMR / HIMS

MULTIPLE OUTPUT FORMATS

Your Data. Your Workflow.

NourDoc can make processed information available in multiple formats depending on downstream requirements.

Output options can include:

- JSON
- XML
- CSV
- PDF
- Structured clinical data
- Text-based documentation
- API responses

- Integration-specific payloads
- Organization-specific formats

Don't force your organization to redesign its workflow to use NourDoc.

Make NourDoc's output work with the workflow you already have.

CODING & BILLING

A Clinical Intelligence Layer for Revenue Cycle Workflows

NourDoc can support organizations involved in:

Medical Coding

Medical Billing

Revenue Cycle Management

Claims Preparation

Healthcare BPO

Clinical Documentation Processing

The platform can transform unstructured clinical information into structured, reviewable information that can be passed into existing coding, billing and clearance workflows.

HUMAN REVIEW

AI-Assisted. Professionally Validated.

NourDoc accelerates information processing while enabling coding, billing and claims professionals to review and validate outputs according to their organizational procedures and applicable requirements.

PAGE 08 — INTEGRATIONS & DEPLOYMENT

HERO

Designed to Fit Into Your Healthcare Ecosystem

NourDoc is not intended to operate as an isolated documentation application.

It is designed as a **clinical intelligence layer** that can connect with the systems healthcare organizations already use.

EHR / EMR / HIM

Connect Clinical Intelligence to Your Systems of Record

NourDoc can offer integration capabilities for leading:

EHR

Electronic Health Record systems.

EMR

Electronic Medical Record systems.

HIMS

Hospital Information Management Systems.

Integration can be designed around the technical architecture and capabilities of the target system.

API & DATA CONNECTIVITY

Build NourDoc Into Your Workflow

Enterprise environments can use integration interfaces to move information between NourDoc and other healthcare systems.

Example

Patient / Encounter Data

NourDoc

Clinical Documentation

ICD-10 / CPT Information

EHR / EMR / HIM

Enterprise Batch Workflow

Existing Clinical Records

NourDoc Batch Processing

Structured Output

Coding / Billing / Claims Workflow

OUTPUT FLEXIBILITY

One Platform. Multiple Downstream Destinations.

NourDoc can make information available through multiple output mechanisms and formats according to organizational requirements.

This enables downstream processing by:

- Healthcare systems
 - Coding companies
 - Billing companies
 - Revenue cycle organizations
 - Data platforms
 - Analytics systems
 - Internal applications
-

DEPLOYMENT OPTIONS

Cloud-Native. On-Premises When Required.

CLOUD

For organizations seeking scalable cloud-based deployment.

ON-PREMISES

For organizations requiring deployment within their own infrastructure.

HYBRID

For organizations requiring a combination of cloud services and existing infrastructure.

ENTERPRISE ARCHITECTURE

Built for Scale

NourDoc's architecture is designed to support:

- High-volume clinical processing
 - Batch workflows
 - API integration
 - Enterprise user management
 - Multiple output formats
 - EHR / EMR / HIMS connectivity
 - Flexible deployment
 - Large-scale encounter processing
-

PAGE 09 — PARTNERS & COLLABORATORS

HERO

Built Through Global Collaboration

The future of healthcare AI requires more than software engineering.

It requires clinical insight, research, healthcare experience and international collaboration.

A GLOBAL HEALTHCARE AI COLLABORATION

Canadian Ownership. Pakistani Engineering. Finnish Research & Healthcare Perspectives.

NourDoc brings together complementary capabilities across borders.

Canadian Ownership & Global Positioning

An international foundation for product growth, partnerships and healthcare-market development.

Pakistani Engineering

NourDoc is developed by an experienced Pakistani technology team with expertise across:

- Artificial Intelligence
- Machine Learning
- Software Engineering
- Data Engineering
- Healthcare Technology
- Cloud Platforms

- Generative AI
- Intelligent Automation

Finnish Research & Healthcare Perspectives

Research and healthcare perspectives contribute to product evolution, evaluation and clinical relevance.

Healthcare Collaborators

Clinicians, institutions and healthcare organizations help bring real-world healthcare requirements into the development process.

COLLABORATION OPPORTUNITIES

Partner With NourDoc

Clinical Collaboration

Evaluate NourDoc in real-world clinical environments.

Research Collaboration

Study ambient clinical intelligence, documentation and healthcare AI.

Technology Integration

Connect NourDoc with healthcare systems and platforms.

Commercial Partnership

Bring NourDoc into new healthcare markets.

Enterprise Deployment

Deploy NourDoc across hospitals, healthcare networks and organizations.

Coding & Billing Partnership

Use NourDoc's batch-processing capabilities within medical coding, billing and revenue-cycle workflows.

BUILD WITH HEALTHCARE

Technology With Real-World Healthcare Input

Healthcare AI becomes more useful when technology teams, researchers, clinicians and healthcare organizations work together.

Build with healthcare. Not just for healthcare.

CTA

Let's Build the Next Generation of Healthcare AI Together.

[PARTNER WITH US] [BOOK A DEMO]

PAGE 10 — ABOUT & CONTACT

HERO

Making Healthcare Technology More Human

NourDoc began with a simple idea:

Healthcare professionals should spend more time listening, thinking and caring — and less time documenting.

We are building technology to help make that possible.

WHO WE ARE

A Global Healthcare AI Initiative

NourDoc is developed by **M3 Hive**, an AI and technology company with deep expertise in artificial intelligence, machine learning, data engineering, software development and intelligent automation.

NourDoc brings this engineering capability together with international healthcare, research and commercial perspectives.

OUR MISSION

Give Time Back to Healthcare Professionals

Our mission is to build intelligent healthcare systems that reduce administrative friction, improve access to clinical information and help healthcare professionals focus on patient care.

OUR VISION

From Documentation to Clinical Intelligence

Today

Conversation → Documentation

Expanding Into

Conversation → Documentation → Coding → Integration → Intelligence → Action

We see Ambient Clinical Intelligence as a foundation for a broader transformation of healthcare information workflows.

CONTACT

Let's Talk About Your Healthcare Workflow

Whether you are:

- A clinician
- A medical practice
- A hospital
- A healthcare network
- A medical coding company
- A billing organization
- An EHR / EMR / HIMS provider
- A technology partner
- A research institution
- A distribution partner

We would like to understand what you are trying to solve.

Talk to Enterprise

MASTER BRAND STATEMENT

NourDoc

Listen to the Patient. Let AI Handle the Paperwork.

Final positioning I would use across the site

The most important change is that **NourDoc should no longer visually or verbally present itself primarily as an “AI scribe.”**

The website should establish this hierarchy:

LEVEL 1 — CLINICIAN

AI Clinical Documentation Assistant

Android → Free Trial → Starter → Professional

LEVEL 2 — HEALTHCARE ORGANIZATION

Ambient Clinical Intelligence Platform

Cloud → Enterprise → On-Premises → EHR/EMR/HIMS

LEVEL 3 — HEALTHCARE OPERATIONS

Enterprise Clinical Information Processing Platform

Batch Processing → 1M+ encounters/day architecture → ICD-10 + CPT → Multiple Formats →
Coding/Billing → Claims/Clearance → Integration

That gives NourDoc a much stronger enterprise narrative without abandoning the simple consumer entry point.

The single most important enterprise message

I would make this visually prominent on the **Medical Coding & Billing** page:

From Voice & Notes to Claim-Ready Documentation

**Process at enterprise scale. Structure clinical information. Support ICD-10 & CPT workflows.
Deliver outputs in the formats your coding, billing and healthcare systems already use.**

And immediately below it:

Designed to entertain 1+ million clinical encounters per day in appropriately configured enterprise environments.

This wording is important: it presents **1M+ encounters/day as an architectural/platform capability**, rather than implying that NourDoc currently processes that volume in production.

Recommended global CTA hierarchy

Primary: Try NourDoc Free

Secondary: Book a Demo

Enterprise: Talk to Enterprise

Technical: Explore Integration

This keeps the website simple for a physician visiting from the Android app while giving a hospital, coding company or enterprise buyer a clear path into the much larger NourDoc platform proposition.
